PRESS RELEASE

For immediate release

Wednesday April 29, 2020

PDHI Powers Drive-Thru COVID-19 Testing

PDHI's ConXus Platform is providing the technology that powers eTrueNorth's pharmacy drive-thru COVID-19 testing program. As part of a public-private partnership, eTrueNorth is working in conjunction with the U.S. Department of Health and Human Services, local municipalities, and national pharmacy chains to provide drive-thru COVID-19 testing locations in areas of need across the country.

The ConXus Platform allows participants to find a testing location, register for testing, schedule an appointment, and review results. PDHI is also coordinating data exchange with processing laboratories and the delivery of daily aggregate result reports to HHS and state health departments.

"PDHI has provided enabling technology for our pharmacy wellness screening and gaps-in-care-closure programs since 2018," says Coral May, President and CEO at eTrueNorth. "I was confident that they had the flexibility and scalability to support this drive-thru testing program on an aggressive timeline."

Testing locations are by appointment only at selected pharmacies and other sites supported by pharmacy-staffed mobile units. A list of testing locations and sites opening soon can be found at <http://www.doineedacovid19test.com>.

"Increasing availability of testing for local communities is a critical mission in these challenging times," says Jennifer Jolley, PDHI CEO. "The team at PDHI is proud to support eTrueNorth and their local pharmacy partners who are providing these much-needed healthcare services."

About PDHI

PDHI is a technology-services organization that develops and distributes the ConXus Platform for delivering workplace wellness and population health management programs. PDHI clients include wellness providers, accountable-care organizations, large employers, third-party administrators, hospital systems, and health plans. ConXus solutions are integrated, flexible and

secure, allowing clients to focus on the delivery of program services rather than the development and maintenance of supporting technology. For more information, visit www.pdhi.com, or connect with us on [LinkedIn](#) and [Facebook](#).

About eTrueNorth

eTrueNorth drives access, quality, and affordability by enabling healthcare services to be provided to consumers at local pharmacies. By empowering local pharmacists to administer preventative healthcare screenings and close gaps in care, eTrueNorth works in partnership with retail pharmacies, self-funded employers, third-party payors and pharmaceutical manufacturers to identify undiagnosed conditions and better manage chronic diseases. eTrueNorth is on a mission to provide access to basic health & wellness services, to every individual, through a network of trusted providers at retail pharmacies. By leveraging the accessibility of retail pharmacies, eTrueNorth expands the scope of services provided to consumers to be more effective and of higher quality and, at the same time, enhance the pharmacy's value as a key participant in a multidisciplinary health care delivery model.

eTrueNorth is now utilizing its proven technology infrastructure to enable drive-through COVID-19 testing across the country. By partnering with national pharmacy brands, eTrueNorth takes full advantage of its Voucher Solution to make testing available to those in need. The company is growing its partnerships with national pharmacy brands to increase COVID-19 testing sites across the country.
